HYBRID COMMS
WORK EVERYWHERE

Business Connect

Reliable and Fast Broadband Connectivity

Your Trusted Partner

Every business needs reliable internet with the right bandwidth and speeds to stay connected. We offer a range of options, so our experts can tailor your connectivity to your needs.

SIP Trunking and hosted telephony have always relied on good quality internet, enhanced by interconnected circuits between ISPs and cloud service providers. With an ever-increasing use of UC&C and cloud-based applications, our reliability on quality internet service provision continues to increase.

Reliable Connectivity

Business Connect from Hybrid Comms is a range of reliable connectivity products. The internet service which can be provisioned is dependent on your location and is therefore worth checking pre your 12-month renewal to ascertain if your area has been upgraded.

Our aim is to make life as easy as possible via automation. Our dedicated portal provides the complete journey form address checking, order provision, to fault checking.

Benefit from L2TP Connection

Hybrid run a L2PT which in basic terms means it allows us to assign an IP address to your access services. Having a Hybrid IP address to our network shortens the route between your you and our core network allowing us to offer the best possible data service.

Business Connect

Reliable & Fast

Reliable, fast and high-quality connectivity solutions to keep your customers connected.

Easy Ordering & Faster Set Up

Easy ordering and easier and faster installation ensures your customers are up and running in next a no time.

Future Proof your Business

PSTN/ISDN services will be turned off by 2025. Switching to a full fibre connection means you won't need to upgrade your broadband connection again.

Hybrid Business Connect

Hybrid Business Connect has three main products groups, leased lines are an additional service which is provided separately.

Fibre to the Premise

Business Connect Fibre to the Premises (BCFTTP) is a pure fibre connection from the exchange into your business or home. It offers higher broadband speeds to specific premises / homes in areas that have been enabled for FTTP with speed from 40/10 to 1000/220. The service doesn't require an analogue telephone line.

The Pros

- Full fibre broadband
- Ultrafast speeds - download speeds up to 1Gbps
- Resilience & Future Proofing
- No phone line needed
- Huge capacity meeting demands of data hungry services
- No signal loss from degradation

The Cons

- Not yet available in all areas

SoGEA

Business Connect Single order Generic Ethernet Access (BCSoGEA) provides internet connectivity without the need for an analogue telephone line but with quicker and easier installation to get connected and be up and running. SoGEA will be the prominent service for the majority of the UK.

The Pros

- Full fibre broadband
- Ultrafast speeds - 0.5/0.5 to 330/50
- Resilience & Future proofing
- No phone line needed
- Fast & easy installation
- Simple ordering
- Seamless transition to all-IP

The Cons

- Not yet available in all areas

Fibre to the Cabinet

Business Connect Fibre to the Cabinet (FTTC) is an alternative technology launched in 2010 and is still very current. It is slower compared to FTTP as the fibre cables from the local exchange stop at the street cabinet. From here copper cabling is used. This service requires an analogue line.

The Pros

- Excellent coverage
- Download speeds of 80Mps
- Uses existing telephone lines

The Cons

- Speeds are limited
- Runs on copper line
- PSTN switch off requires everyone to switch to an IP network

The Benefits

UK & Global Connectivity

Single point of contact, deliver voice and data on the same network connection. Scale it up and down to meet your needs.

L2TP - Direct Connection

Better connectivity into our core network. Calls directed to our L2TP connection allows us to deliver the best possible service.

Easy Ordering & Set Up

Easy to order via our portal and quicker to install.

Complete Control

Get the choice to order with or without a router - have the service managed or manage it yourselves.

One Service Provider

End-to-end service from provisioning to set up from one service provider. In the event of a fault you have one call to make.

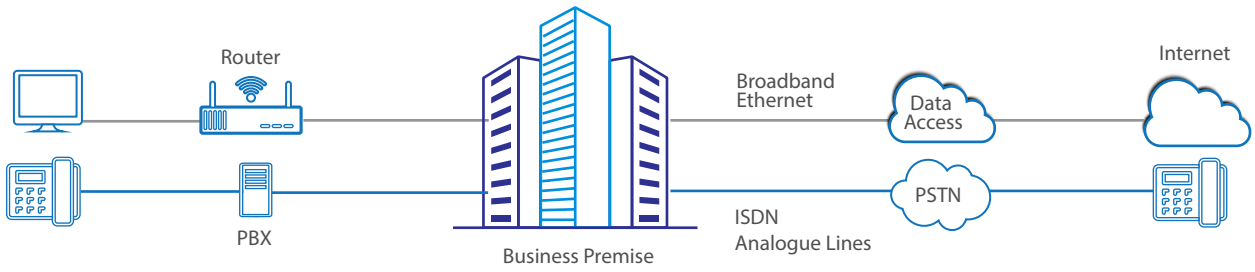
Proactive Support

Dedicated account managers and first-line technical support to ensure seamless service transition.

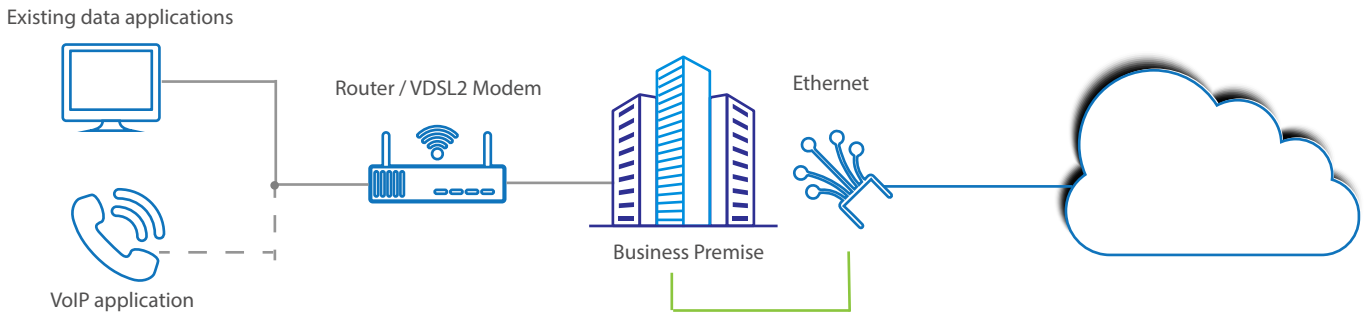
PSTN Switch Off

The analogue telephone line which underpins 90% of broadband connections in the UK will be withdrawn in 2025. The need to change to a service that is not underpinned by an analogue telephone line is real. Openreach's full fibre network is arriving quickly with a full National WLR stop sell taking place in September 2023. The move to all IP will impact everyone. Many will relish the fact they will no longer need to pay for a PSTN line to receive a broadband connection but others rely on their voice service. If you need a single voice service to replace the analogue voice service, SoGEA Voice is what you need.

How it works today



How it will work from 2023



Make the Move

2025 might seem a long way off and so decide to wait and see but change must happen, it is not a question of if but when. Now is the time for everyone to start. Let us help you to navigate to make the move.

Why Hybrid Comms:

- **An established & leading provider of modern business voice, internet and communications solutions**
- **Providing a simple, easy-to-manage service, putting you in control of your business comms**
- **Delivering futureproof, efficient comms infrastructure tailored to your needs**
- **Independent advice we'll guide you to a solution that suits your business**
- **Get the support when you need it**
